

AIRPORT DOORS

Quality Door Solutions

The Roller Door's economical, durable and convenient features make it still one of the most popular and essential garage doors on the market.

Roller Doors
SERIES A & B

Airport Doors' roller doors have a unique rigid profile that provides extra strength and durability. Custom manufactured to suit your door opening requirements, roller doors are ideal for residential applications such as garages, carports and lane ways and are also suitable for commercial and light industrial purposes.

Features

- Economical
- Strong rigid profile
- Variety of colours

Door Dimensions

Series A

Max. Door Height: 3000mm

Max. Door Width: 3740mm

Door overlaps opening width 30mm on each side.

Series B

Max. Door Height: 3300mm

Max. Door Width: 5100mm

Door overlaps opening width 50mm on each side.

Colours

Choose from a wide range of Colorbond® colours. Consult your Airport Doors consultant or see the Colour Chart on our website for colour options.

Strength & Durability

The roller door curtain is formed by a continuous, roll-formed, deep profile steel sheet, lock seamed together. The door curtain fully wraps around the drum wheel enclosing the strong helical coil torsion springs. The roller door superior designed support brackets consist of a heavy duty triangular design for Series A roller doors and a heavy duty steel angle for Series B roller doors.

Smooth Performance

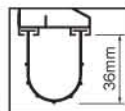

The unique rigid steel curtain is fitted with a nylon felt strip which runs down both sides of the curtain to provide smooth operation.

Locking

Series A & B roller doors are fitted with a centre lift-lock at waist height (unless otherwise specified).

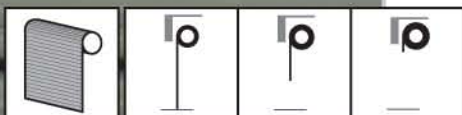

Weather-seal

Roller doors are fitted with a durable PVC bottom weather-seal to overcome slightly uneven concrete and minimise rain and leaves coming into the garage.

Operation

Roller Doors operate by means of a flexible curtain revolving on a roller drum and are guided by steel door guides.
